

Technology Stack

Date	3 July 2026
Team ID	SWTID-2026-8260
Project Name	A Comprehensive Measure of Well-Being using HDI Prediction System
Maximum Marks	2 Marks

Define Your Technology Stack:

In this project, we use a combination of technologies for developing an HDI prediction system.

The frontend is built using HTML and CSS to create a simple and user-friendly interface.

The backend is developed using Python with Flask framework to handle user input and connect with the machine learning model.

For data processing and model building, libraries like Pandas, NumPy, and Scikit-learn are used. The dataset is stored in CSV format.

Version control is managed using GitHub, and the application can be deployed using platforms like Render or run locally.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS	Simple UI design

2	Backend / Server-Side	<i>Python (Flask)</i>	<i>Lightweight & fast</i>
3	Database / Data Storage	<i>CSV Dataset</i>	<i>Easy handling</i>
4	Cloud / Hosting / Deployment	<i>Localhost / Render</i>	<i>Easy deployment</i>
5	Version Control & CI/CD	<i>GitHub</i>	<i>Code management</i>
6	Third-Party APIs / Other Tools	<i>Scikit-learn, Pandas</i>	ML & data processing
